

IILM University, Greater Noida

PHP & SQL Web Development Internship

APOORVA GUPTA

Roll No. 2410030800
B,tech CSE (Data Science)
Physics Wallah

From a channel to a public company

Founded by Alakh Pandey & Prateek Maheshwari

Internship at a glance

03 MONTHS

Duration

BACKEND

Web development

PHP + SQL

Core technologies

WAMP

Local environment

MYSQL

Database

INTERN APP

Role-based system

Six objectives. One practical outcome.

LEARN → APPLY → SECURE → DELIVER

A layered web development stack

HTML — Structure

CSS — Presentation

PHP — Backend logic

MySQL — Relational data

phpMyAdmin — Administration

WAMP — Local environment

Three months: learn, build, refine

01

LEARN

PHP basics • SQL fundamentals
WAMP • phpMyAdmin • local setup

02

BUILD

Intern App • authentication • RBAC
CRUD • database integration

03

REFINE

Uploads • testing • debugging
security validation • documentation

One application. Two role experiences.

USER

PERSONAL ACCOUNT

- Login
- View profile
- Edit details
- Upload profile picture

ADMIN

SYSTEM GOVERNANCE

- View all users
- Add & edit users
- Change roles
- Delete users

System workflow

Identity is verified. Access is enforced.

“Access control is enforced on the server side, not merely by hiding interface elements.”

Unauthorized URL access is blocked and redirected appropriately.

Security is designed into every request

01 PASSWORD HASHING

Secure hashes, never plain text

02 PREPARED STATEMENTS

Database queries resist SQL injection

03 AUTHENTICATION

Valid credentials establish identity

04 AUTHORIZATION

Roles define permitted actions

Database architecture & CRUD

Testing & debugging checklist

Login / logout

User permissions

Admin permissions

CRUD operations

Unauthorized URLs

Profile upload

Form validation

Bug fixing & refinement

Capabilities built through practice

PHP Backend

SQL & Databases

CRUD

AuthN / AuthZ

RBAC

Password Security

Injection Prevention

Debugging & Testing

Documentation

Challenges converted into solutions

Backend flow	PHP request / response practice
Managing roles	Server-side RBAC
Database security	Prepared statements
Password protection	Secure password hashing
File uploads	Controlled handling & validation
Debugging	Systematic workflow testing

Theory became a repeatable practice

Practical development strengthened secure coding awareness, debugging discipline, and professional communication.

Future scope: from local app to scalable system

01 Email verification

02 Password reset

03 Admin analytics

04 Search & filtering

05 Pagination

06 Upload validation

07 Production deployment

08 API integration

09 Audit logging

A complete backend development cycle

3 months • PHP + MySQL • Functional RBAC application • Secure coding • Testing & documentation
